

# Cookie Policy

## **What are cookies and what they use for**

Cookies are small text files that are saved in your browser while you visit the web site. When you visit the web site repeatedly, this data is sent back to the web that is processing it. This site allows, for example, to distinguish individual users without their direct identification. This makes it more user-friendly to use the site without risk of misuse of personal information.

## **They are used for example when:**

- Remembering customer's log in so they do not have to re-enter them again
- Setting the correct site functionality, for example, by setting the default language setting, device type, or user screen resolution
- Remembering the contents of the shopping cart for the next visit

## **What type of cookies we use:**

In terms of durability, cookies can be divided into two basic types: short-term cookies that are stored on your device only while the browser is open, and long-term cookies that remain stored in the browser after it is closed.

**Setting the use of cookies** can be done in the settings of your web browser. Most browsers automatically use and process cookies by default. By using your browser you can refuse cookies or use it to set up to use only some. Information about the use of cookies and their settings, visit the browser support pages:
